Business Editors/High-Tech Writers

WASHINGTON--(BUSINESS WIRE)--Oct. 10, 2003

21st Century Technologies, Inc. (OTCBB:TFCT) announced today that it has retained Perennial Strategy Group, an influential Washington lobbying firm, to broaden awareness in Congress and government agencies of the homeland security benefits from its powerful products that can quickly contain leaks resulting from terrorist attacks.

The patented devices, known as SeaPatch and ProMag, also have a more traditional use in pipeline, oil barge or tank car accidents. But with the nation on alert for possible terrorist activities, 21st Century Technologies and Perennial are letting government officials know that their products can play a critical role in containing any attacks on the nation's systems, including the vast energy and water infrastructure.

"We have products that can make a difference in our nation's ability to contain attacks on our vital systems," said Arland Dunn, President and CEO of 21st Century and President of Trident Technologies, Inc., a wholly-owned subsidiary manufacturing the products. "It is important that government officials are aware of these benefits. We have hired Perennial Strategy Group to open the doors that will we hope will make these products available to the emergency and disaster personnel around the country who need them."

John Milne, a principal at Perennial Strategy Group, also cited the environmental benefits from the products, noting that they reduce potential damage to our natural resources from leaks and spills. "These two products can help save our environment and make our nation safer," Mr. Milne said. "We will use our extensive network of government contacts to ensure that the right people are in the know about what these products can do for our environment and for the security of our nation."

SeaPatch and ProMag are magnetic-powered quick seal devices, capable of stopping leaks and sealing ruptures, quickly, easily, economically and effectively on containers from ships at sea to rail tank cars, to pipe lines to HAZMAT holding tanks.

Safe Harbor Statement

The statements made by 21st Century Technologies, Inc. (the company) may be forward-looking in nature and are made pursuant to the safe harbor provisions of the Private Securities Reform act of 1995. Forward-looking statements are based on assumptions and involve a number of risks and uncertainties, many of which are beyond the control of the Company. Actual results could differ materially from those projected due to risks such as changes in interest rates, market competition, our ability to generate orders and various other business factors.
